MATHEMATICS OF COMPUTATION

CONTENTS

Vol. 67, No. 221 January 1998

James H. Bramble, Joseph E. Pasciak, and Apostol T. Vassilev, Analysis of non–overlapping domain decomposition algorithms with inexact solves 1

Kazufumi Ito and Franz Kappel, The Trotter-Kato theorem and approximation of PDEs 21

Stig Larsson, Vidar Thomée, and Lars B. Wahlbin, Numerical solution of parabolic integro-differential equations by the discontinuous Galerkin method 45

Sigal Gottlieb and Chi-Wang Shu, Total variation diminishing Runge-Kutta schemes 73

Haitao Fan, Existence and uniqueness of traveling waves and error estimates for Godunov schemes of conservation laws 87

Alfredo Bermúdez, Ricardo Durán, and Rodolfo Rodríguez, Finite element analysis of compressible and incompressible fluid-solid systems 111

Héctor D. Ceniceros and Thomas Y. Hou, Convergence of a non-stiff boundary integral method for interfacial flows with surface tension ... 137

Willem Hundsdorfer, A note on stability of the Douglas splitting method 183

Amos Ron and Zuowei Shen, Compactly supported tight affine spline frames in $L_2(\mathbb{R}^d)$ 191

M. Jesús Castel, Violeta Migallón, and José Penadés, Convergence of non-stationary parallel multisplitting methods for hermitian positive definite matrices 209

Suely Oliveira, A new parallel chasing algorithm for transforming arrowhead matrices to tridiagonal form 221

J. C. Miellou, D. El Baz, and P. Spiteri, A new class of asynchronous iterative algorithms with order intervals 237

Hidetsune Kobayashi, Hideo Suzuki, and Yoshihiko Sakai, Numerical calculation of the multiplicity of a solution to algebraic equations 257

A. Melman, Analysis of third-order methods for secular equations 271

Isao Shoji, Approximation of continuous time stochastic processes by a local linearization method 287

Fred J. Hickernell, A generalized discrepancy and quadrature error bound 299

Riadh Ben Ghanem, Quadrature formulae using zeros of Bessel functions as nodes 323

Kie H. Ham and Gary L. Mullen, Distribution of irreducible polynomials of small degrees over finite fields 337

Shuhong Gao, Joachim von zur Gathen, and Daniel Panario, Gauss periods: orders and cryptographical applications 343

I. A. Semaev, Evaluation of discrete logarithms in a group of p-torsion points of an elliptic curve in characteristic p 353

M. J. Grannell, T. S. Griggs, and R. A. Mathon, Steiner systems $S(5,6,v)$ with $v = 72$ and 84 357

M. Pohst and K. Wildanger, Tables of unit groups and class groups of quintic fields and a regulator bound 361

Stanislav Jakubec, On divisibility of the class number h^+ of the real cyclotomic fields of prime degree l 369

Graeme L. Cohen and Herman J. J. te Riele, On ϕ–amicable pairs 399

Michael A. Bennett and Benjamin M. M. de Weger, On the diophantine equation $|ax^n - by^n| = 1$ 413

J. H. E. Cohn, A conjecture of Erdös on 3-powerful numbers 439

Anders Björn and Hans Riesel, Factors of generalized Fermat numbers 441

Reviews and Descriptions of Tables and Books 447

Dormand **1**, Lebedev **2**, Press, Teukolsky, Vetterling and Flannery **3**, Sima **4**, Zhang and Jin **5**, Jensen, Kuperman, Porter and Schmidt **6**, Astfalk, Editor **7**

Supplement to "Steiner systems $S(5,6,v)$ with $v = 72$ and 84" by **M. J. Grannell, T. S. Griggs, and R. A. Mathon** S1

Microfiche Supplements

Shuhong Gao, Joachim von zur Gathen, and Daniel Panario, Gauss periods: orders and cryptographical applications

Anders Björn and Hans Reisel, Factors of generalized Fermat numbers

Vol. 67, No. 222 **April 1998**

Georgios Akrivis, Michel Crouzeix, and Charalambos Makridakis, Implicit-explicit multistep finite element methods for nonlinear parabolic problems 457

Ohannes Karakashian and Charalambos Makridakis, A space-time finite element method for the nonlinear Schrödinger equation: the discontinuous Galerkin method 479

Norbert Heuer, Ernst P. Stephan, and Thanh Tran, Multilevel additive Schwarz method for the h-p version of the Galerkin boundary element method 501

X. Chen, L. Qi, and D. Sun, Global and superlinear convergence of the smoothing Newton method and its application to general box constrained variational inequalities 519

Zhimin Zhang, Derivative superconvergent points in finite element solutions of Poisson's equation for the serendipity and intermediate families – a theoretical justification 541

Christophe Labreuche, A convergence theorem for the fast multipole method for 2 dimensional scattering problems 553

Weidong Lu, Convergence of a random walk method for a partial differential equation 593

Paul A. Farrell, John J. H. Miller, Eugene O'Riordan, and Grigorii I. Shishkin, On the non-existence of ε-uniform finite difference methods on uniform meshes for semilinear two-point boundary value problems 603

Bao Cheng Li and Stavros Syngellakis, Numerical conformal mapping based on the generalised conjugation operator 619

Lori A. Carmack, Numerical evaluation of a symmetric potential function 641

Rong-Qing Jia, Approximation properties of multivariate wavelets 647
